

OIL INDIA LIMITED - MUD REPORT

CONFIDENTIAL / SYNTHETIC DEMONSTRATION REPORT — NOT ACTUAL OIL DATA

Report Title: Rheology and Fluid Integrity Report
Target Well: WELL-D | Document Type: Mud Report

System: NWIS RAG Archive

1. Fluid System Specifications

Well: WELL-D. Date: 2023-01-22.
Synthetic demonstration report — not actual OIL data.
Current Depth: 2890 m in Disang Shale formation.

2. Overpressure & Gas Influx Event

Depth: 2890 m. Event: Kick. Severity: Critical.
Cause: Abrupt pore pressure transition zone encountered in lower Disang Shale.
Observations: Pit volume increase of 14 bbl in 4 minutes with pump pressure fluctuation.
Mitigation: Shut in well immediately using annular blowout preventer. Applied Wait and Weight well kill method.
Outcome: Influx circulated out safely; well killed successfully and mud weight raised from 1.15 to 1.28 SG.
Operations resumed after 16 hours of pressure verification.
